## **Arrival and Pilot Embarkation at Ambrose Pilot Station**

The Sandy Hook Pilots maintain a pilot vessel on station year round. Either the Pilot Boat New York or Pilot Boat New Jersey will be “On Station” and monitoring VHF channels 13, 16 and 73. Both vessels are equipped with AIS. Using a 53ft (16m) aluminum launch, the pilot will be embarked from this vessel. The pilot launch carries the same lights as the pilot boats on station.

Vessels approaching the Ambrose Pilot Station from sea should give the pilot boat a minimum of three hours advance notice. Vessels should make a second call to the pilot boat when they are one hour from the sea buoy. Pilot boarding side will be given at that time.

## **Important Information Your Pilot Will Need**

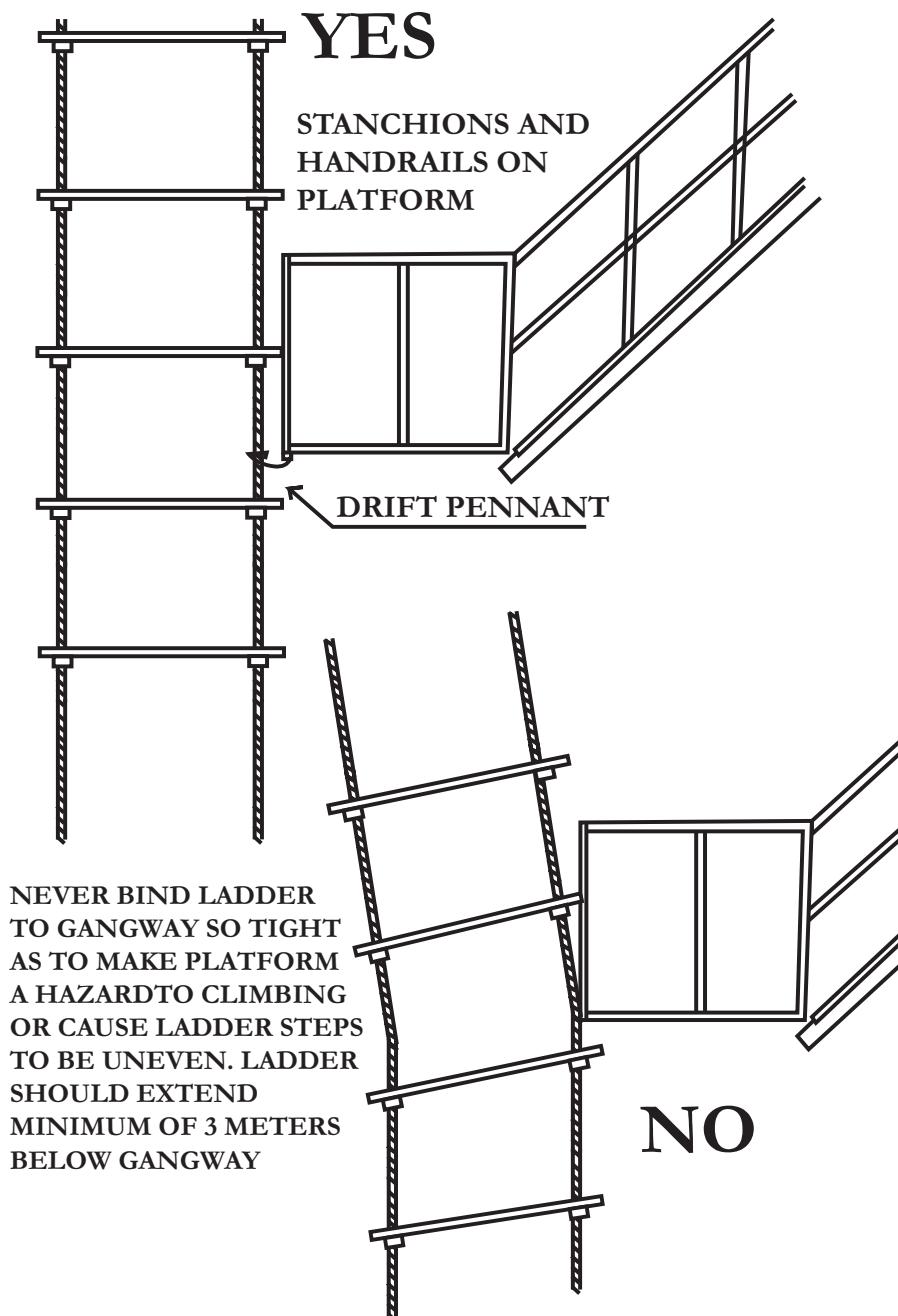

It is imperative that you brief your pilot about any automatic engine monitoring systems that could potentially shut down or would significantly reduce the power of the main propulsion engine system without substantial warning. If possible, these systems should be overridden for transiting New York Harbor pilotage waters. Please advise your pilot if any unusual problem with the ship's control or navigational systems have occurred in the last month.

# Pilot Ladder Requirements

1. Arrangements shall be provided to enable the pilot to embark/disembark safely on either side of the ship.
2. The rigging of the pilot transfer arrangements and the embarkation of a pilot shall be supervised by a responsible licensed deck officer having means of communication with the navigation bridge. The officer shall also arrange for the escort of the pilot by a safe route to/from the navigation bridge.
3. The ladder must be made in one length and not consist of two lengths shackled or lashed together and should be equipped with spreaders about 10 feet (3m) apart.
4. Whenever the distance from the surface of the water to the access point of the ship is more than 9 meters, an accommodation ladder in conjunction with a pilot ladder must be used. The accommodation ladder shall be sited leading aft and shall be secured to the hull. When in use, means shall be provided to secure the lower platform of the accommodation ladder to the ship's side, so as to ensure that the lower end of the accommodation ladder and the lower platform are held firmly against the ship's side and the pilot ladder remains against the ship's side.
5. In the case of a combination arrangement where the accommodation is fitted with a trap door in the bottom platform, the pilot ladder shall be rigged up through the trap door and extend above the platform to the height of the handrail.
6. Adequate lighting shall be provided to illuminate the transfer arrangements alongside and the position on the deck where a pilot embarks/disembarks.
7. Trailing lines or retrieving lines must not be attached to the lower ends of the ladder.
8. Ladders must be rigged well clear of the water, clear of any discharge outlets, and at a place near midships.
9. Means shall be provided to ensure safe and unobstructed passage for any person embarking or disembarking the ship between the head of the pilot ladder and the ship's deck. Adequate handholds or two rigidly secured handhold stanchions shall be fitted.

# Pilot Ladder Requirements

10. Vessels must comply with SOLAS Chapter V Regulation 23 - Pilot Transfer Arrangements.
11. The pilot ladder shall be rigged 1.5 meters above the water's edge. A heaving line must be available.

### SPECIAL NOTATION

Vessels navigating in the Vicinity of Rikers Island with a mast height of over 125 ft. should use caution when crossing La Guardia Airport flight approaches. # 718-779-1220/nite 718-779-7901.

This is a listing of the various marine terminals, bridges and landmarks in relationship to each other, which a vessel will pass in transiting the East River. The mileage given is the distance for west-bound vessels from Execution Rocks to the Battery and for east-bound vessels from the Battery to Execution Rocks.

Vessels navigating in the vicinity of Rikers Island with a mast height of over 125' should use caution when crossing LaGuardia Airport flight approaches.

## Hudson River Drafts

Maximum Air Draft - 132'

### Upper Hudson River North of Kingston

Maximum Draft - 30' (Fresh Water Draft)

Vessels transiting the Upper Hudson River with drafts of 27' to 30' must be set up for the correct stage of a rising tide.  
Daylight transits only north of Kingston.

### Lower Hudson River South of Kingston

Maximum Draft- 33' (Salt Water Draft)

Vessels transiting the Lower Hudson River with drafts of 31 ' to 33' must be set up for the correct stage of a rising tide.  
Daylight transits only north of Kingston.

Vessels with a draft of 31' or less may transit the Lower River any time.

All vessel draft information is subject to existing weather conditions at the time of transit.

Please call our Dispatchers for assistance in setting Hudson River transits or with any other questions.

Hudson River Pilots - 718-815-4316.

## Determining the Air Draft of a Ship Not on Even Keel

HEIGHT OF THE MAST is the distance from the keel to the top of the mast.

AIR DRAFT is the distance from the waterline to the top of the mast.

To determine the air draft of a ship not on even keel take the difference in draft fore and aft, DIVIDE by the Length Between Perpendiculars, TIMES the Distance from the deepest perpendicular to the mast. This is the increase in Air Draft above that determined by subtracting the deepest draft from the height of the mast.

$$\frac{20}{600} \times \frac{150}{1} = 5$$

---

**OR**

---

$$30 - 10 = 20$$

$$(20 / 600) \times 150 = 5 \text{ FEET}$$

Actual air draft is 5 feet more than if  
using deepest draft

## Principal Light and Fog Signals in the Port of New York

Name	Light	Fog Signal
Scotland Lighted.....	Morse "A".....	1 Bl. ev. 30 sec.
Horn Buoy S.....		Racon Signal M.
Sandy Hook Pt. Lt.....	Iso., W. 6 sec.....	1 Str. ev. 10 sec.
Sandy Hook Lt.....	FW	
Romer Shoal Lt.....	Fl. (2) W. 15 sec.....	1 Bl. ev. 15 sec.
	Emerg. Lt. - Fl. W. 6 sec.	
	when main Lt. exting.	
West Bank Front Lt.....	Iso., W. sector, 6 sec....	2 Bl. ev. 20 sec.
Coney Island Lt.....	Fl. R. 5 sec	
Verrazano Narrows Br .....		1 Bl. ev. 15 sec.
Robbins Reef Lt.....	Fl. G. 6 sec .....	1 Bl. ev. 10 sec.
Gov. Is. Ext. Lt.....	FR.....	1 Bl. ev. 15 sec.
Gov. Is. Lt.....	2 FR.....	2 Bl. ev. 20 sec.
Outerbridge Crossing.....		1 Bl. ev. 15 sec.
Hell Gate Lt. 15.....	Fl. G. 2.5 sec	
N. Brothers Is. N. Lt. 9.....	Fl. G. 4 sec	
Whitestone Pt. Lt. 1.....	F. G.	
Throgs Neck Lt.....	F. R	
Throgs Neck Bridge.....		2 Bl. ev. 20 sec.
Stepping Stones Lt.....	Oc. G. 4 sec.....	1 Bl. ev. 15 sec.
Hart Island Lt. 46.....	Fl. R. 4 sec	
Execution Rock Lt.....	Fl. W. 10 sec.....	1 Bl. ev.15 sec.

## **Ranges and Bearings in the Port New York / New Jersey**

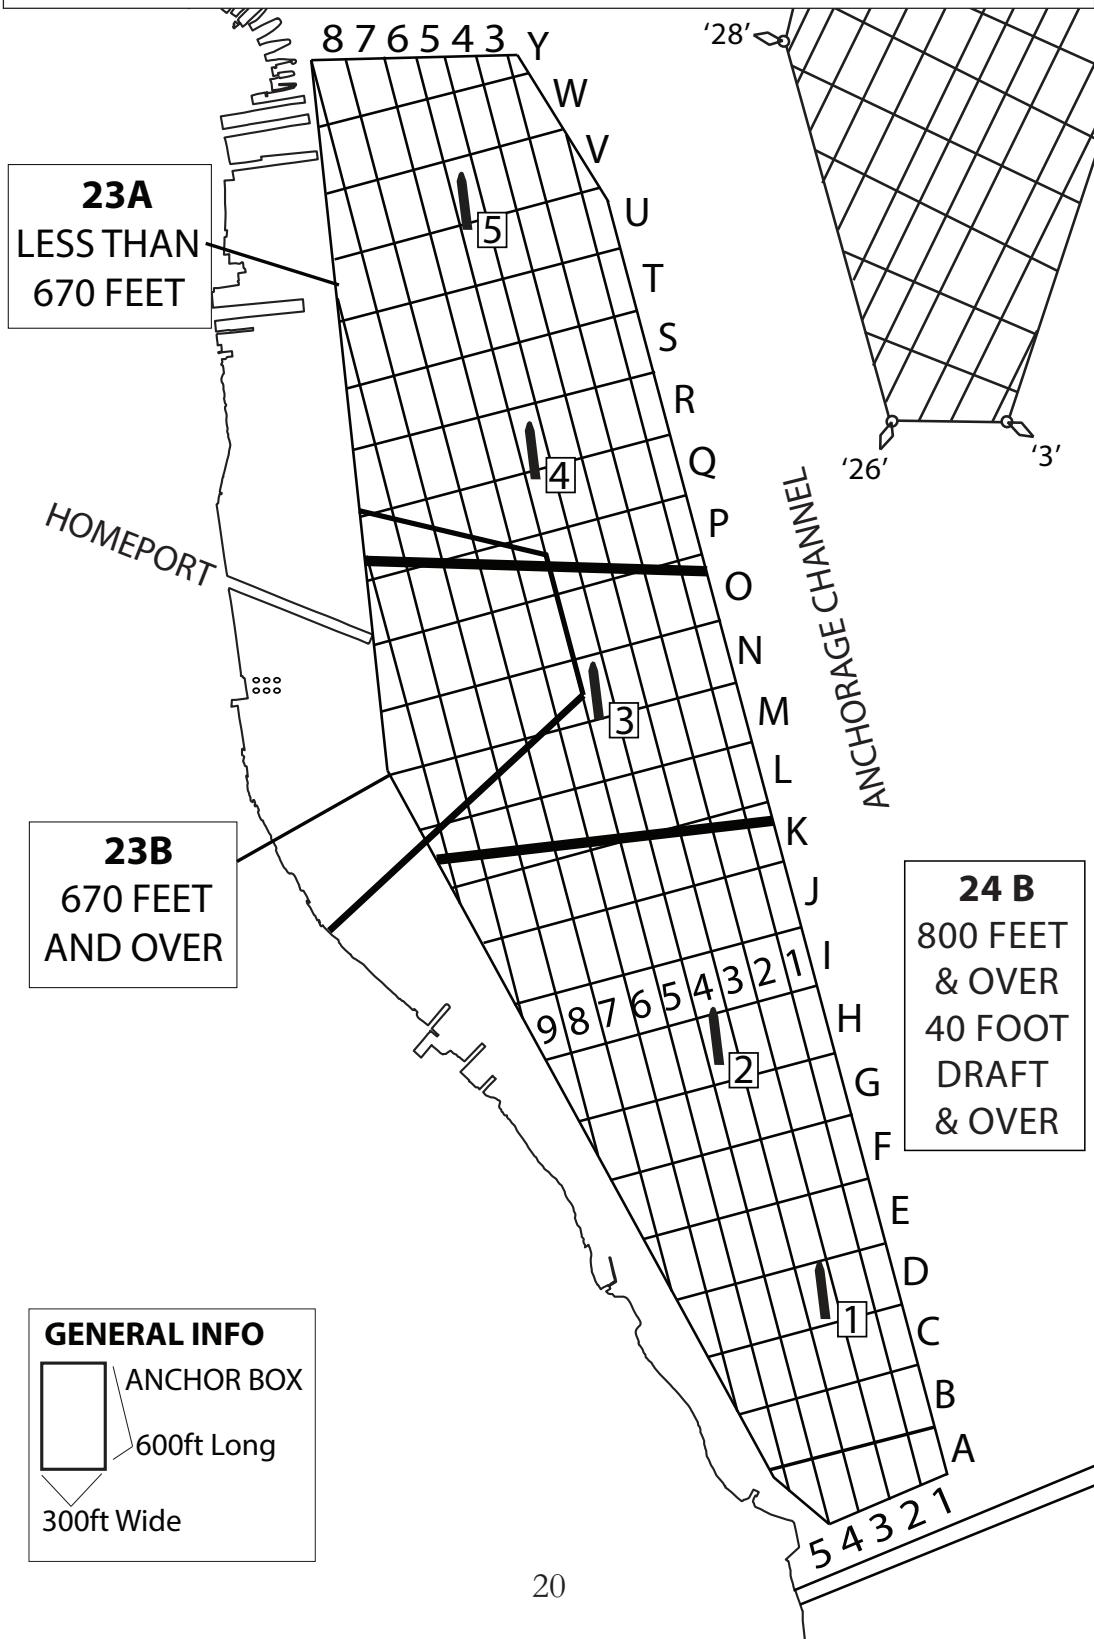

<b>Range</b>	<b>Bearing</b>

## GENERAL INFO

## **Anchorages**

<b>Number</b>	<b>Locations</b>
19	Hudson River Naval Anchorage
20 - A	Liberty
20 - B	North Side Bayonne Naval Terminal
21 - B	Red Hook Flats
23	Staten Island
24	Quarantine
25	Gravesend Bay (Eastern Part)
27	Sandy Hook
44	Perth Amboy
49 - C	Gravesend Bay (Western Part)
49 - G	Leonardo

## **Anchorages Regulations**

WHEN ANCHORED IN FEDERAL ANCHORAGE 20-A

THROUGH 20-G, 21-A, 21-B, 21-C, 23-A AND 23-B, 24

OR 25 MUST COMPLY WITH THE FOLLOWING

REQUIREMENTS:

- MAINTAIN A BRIDGE WATCH.
- GUARD AND ANSWER CHANNEL 16 FM AND  
MAINTAIN AN ACCURATE POSITION PLOT.
- NOTIFY THE COAST GUARD ON CHANNEL 12 WHEN  
COMMENCING AND COMPLETING THE  
TRANSFERRING OF PETROLEUM PRODUCTS.
- NOTIFY THE COAST GUARD ON CHANNEL 12 WHEN  
ANCHORED AND WHEN LEAVING THE ANCHORAGE.

## Common Conversion Factors and Metric Tables

Barrels (fuel oil).....	42.	Gallons (fuel oil)
British Gallon .....	1.20094	U.S. Gallons
Cable .....	600.0	Feet
Centimeters .....	00.3937	Inches
Cubic Feet .....	1728.0	Cubic Inches
Cubic Feet (fresh water) .....	62.5	Pounds Fresh Water
Cubic Feet (sea water) .....	64.0	Pounds Sea Water
Feet .....	0.3048	Meters
Gallons .....	3.78533	Liters
Gallons of Water .....	8.33	Pounds of Water
Inches .....	2.54	Centimeters
Kilograms .....	35.274	Ounces
Kilograms (KG) .....	2.20462	Pounds
1000 KG (1 metric ton) .....	0.98421	Long Tons
IGlometers .....	3281.0	Feet
Knots .....	1.152	Miles Per Hour
Liters .....	0.2642	Gallons
Meters .....	3.281	Feet
Meters .....	1.0936	Yards
Miles .....	1.609	Kilometers
Miles (land) .....	5280	Feet
Miles (nautical) .....	6080	Feet
Tons (long) 2,240 lbs. ....	1.016047	Metric Tons
Tons (short) 2,000 lbs .....	0.90718486	Metric Tons
Tons (long) Fresh Water .....	35.84	Cubic Feet Fresh Water
Tons (long) Sea Water .....	35	Cubic Feet Sea Water
Yards .....	0.9144	Meters
Fahrenheit = 915 Centigrade + 32°		
Centigrade = (Fahrenheit - 32°) x 5/9		

To find diameter of a circle, multiply circumference by .31831.  
 To find circumference of a circle, multiply diameter by 3.1416.  
 To find area of a circle, multiply square of diameter by .7854.  
 To find surface of a ball, multiply square of diameter by 3.1416.  
 To find cubic inches of a ball, multiply cube of diameter by .5236.  
 Doubling the diameter of a pipe increases its capacity four times.  
 Double riveting is from 16 to 20 percent stronger than single.

### METRIC CAPACITIES

1 Milliliter	= 0.001 Liters
1 Centiliter	= 0.01 Liters
1 Deciliter	= 0.1 Liters
1 Dekaliter	= 10 Liters
1 Hectoliter	= 100 Liters
1 Kiloliter	= 1000 Liters

### METRIC LENGTHS

1 Millimeter	= 0.001 Meters
1 Centimeter	= 0.01 Meters
1 Decimeter	= 0.1 Meters
1 Dekameter	= 10 Meters
1 Hectometer	= 100 Meters
1 Kilometer	= 1000 Meters

### BOW THRUSTER CONVERSION

KW. X 1.361 = Horsepower

## **PRECAUTIONARY STATEMENT**

The tide figures used herein are based upon the National Oceanic and Atmospheric Administration tables, and we believe them to be accurate. They cannot, however, be guaranteed because tides tend to vary with the weather conditions.

Other information herein is based upon sources deemed to be reliable and is believed to be correct but it is likewise not guaranteed.

Effective October 28, 1991, the National Ocean Service (NOS) Tidal current charts - New York Harbor will be officially withdrawn from distribution. A recent evaluation shows that tidal currents determined from the New York Harbor charts, last revised in 1976, are not as accurate as those determined from more recent information published in the NOS Tidal Current Tables - Atlantic Coast of North America including Greenland. NOS plans no further revisions of the tidal current chart series.

## **PRECAUTIONARY NOTE - TIDAL CURRENT PREDICTIONS FOR NEW YORK HARBOR**

Tidal currents at The Narrows, and at Hell Gate have been reported to deviate significantly from official predictions published by the National Ocean Service (NOS). Tidal currents in Arthur Kill and Kill Van Kull have also been reported to deviate significantly from prediction computed from table 2 values in the NOS Tidal Current Tables - Atlantic Coast of North America. Such reports cannot, at this time, be either confirmed or dismissed. Until NOS conducts a Quality Assurance Study for these locations, mariners should exercise caution and discretion in the use of published tidal current predictions for these locations.

Enter the table with the duration of rise or fall which most nearly agrees with the actual value and on that horizontal line find the time from the nearest high or low water which agrees most nearly with the corresponding actual difference. The correction sought is in the column directly below, on the line with the range of tide.

HEIGHT OF TIDE AT ANY TIME											
Time from the nearest high water or low water											
Duration											
h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.

1. Enter from the top of the proper table with the time interval between slack and maximum current encompassing the time for which the velocity is desired.
  2. Enter from the side of the proper table with the interval between slack and the desired time.
  3. Multiply factor corresponding to above intervals, by maximum current from daily predictions.
